- Topología de red lógica.
- Plan de diagnóstico.
- Plan de manejo de excepciones y recomendaciones para adquisición de elementos.

## DEFINICIONES

Con el objetivo de dar mayor contexto del documento se presentan las siguientes definiciones:

- ✓ **SIP:** es un protocolo de señalización utilizado para establecer una “sesión” entre 2 o más participantes, utilizado para telefonía IP.
- ✓ **IPv4:** El Protocolo de Internet versión 4 en inglés, Internet Protocol versión 4 (IPv4), protocolo de interconexión de redes basados en Internet, y fue la primera versión implementada para la producción de ARPANET.
- ✓ **Pv6:** El Protocolo de Internet versión 6, en inglés, Internet Protocol versión 6 (IPv6), es una versión del Internet Protocol (IP), definida en el RFC 2460 y diseñada para reemplazar a Internet Protocol versión 4 (IPv4) RFC 791.
- ✓ **DHCP:** Protocolo de configuración de host dinámico, es un protocolo de red utilizado en redes IP que se encarga de asignar direccionamiento IP a dispositivos de red.
- ✓ **NAT:** es un mecanismo utilizado por Router IP para intercambiar paquetes entre dos redes que asignan mutuamente direcciones incompatibles. Consiste en convertir, en tiempo real, las direcciones utilizadas en los paquetes transportados.
- ✓ **Dual Stack:** El Dual Stack o pila doble permite desplegar las dos versiones del protocolo IP de manera simultánea en toda la red, se determinará de manera automática cuando se deberá usar IPv4 y cuando se deberá usar IPv6 de esta manera habrá inter-operatividad entre todos los equipos independiente de los protocolo los mismos estén usando.
